

## **LIQUID CRYSTALS EMULSION WITH REPAIRING ACTION**

Containing vegetable biostimulins

**EUDENA Emulsion** is particularly suitable as cosmetic in the rebalancing of the physiological skin regeneration process.

**EUDENA Emulsion** contributes to re-establish, as supporting cosmetic, the favorable tissue conditions to the normal recovery process.

The **liquid crystals emulsion** comes from the most recent cosmetologic research. The emulsion, by imitating the lamellar structure of the skin corneal layer, it is particularly akin to the skin with big advantages for skin hydration and for the absorption and utilization of the active ingredients dispersed therein.

### **PROPERTIES OF THE MAIN COMPONENTS**

- **VEGETABLE BIOSTIMULINS** – Extracted substances with activity that highly stimulates the proliferation of skin fibroblasts.
- **N.M.F.** - (Natural Moisturizing Factor). It is a mixture of natural substances consisting of polycondensate of amino acids and sugars, P.C.A., Urea, Lactic Acid, cholesterol and mineral salts. These substances retain a large amount of water "tying" in the skin structures. A valid moisturizing complex useful not only to restore the physiological hydration, but especially to facilitate the absorption of the functional substances contained in it.
- **HYDROLYZED MUCOPOLYSACCHARIDES** - The two main mucopolysaccharides used for cosmetic purposes (hyaluronic acid and chondroitin sulfate) contribute to maintaining water and electrolyte content of the cutaneous tissue, promoting the elasticity and strength of the skin.
- **ALLANTOIN** - It stimulates the regeneration of skin tissue.
- **D-PANTHENOL** - It has a moisturizing and soothing activity.
- **VITAMIN A** – Useful to avoid, prevent or delay skin aging phenomena, dry or chapped skin. Recent studies have also demonstrated the ability to contrast the formation of wrinkles.
- **VITAMIN E** – It is best known natural antioxidant. It interferes positively with the degenerative action induced by free radicals and is therefore useful for skin protection.
- **VITAMIN F** – It exerts a regenerating action on skin cells, helping to restore the dermal barrier and the natural endogenous moisturizing factor (N.M.F.).
- **EXTRACT OF ECHINACEA** – It determines a cicatrizing action and stimulates the activity of skin fibroblasts, resulting in increased formation of connective tissue.

**SUGGESTED TREATMENTS**

**EUDENA Emulsion** is specific for protection and wellness of the skin. It helps to restore the tissue conditions favorable to the normal recovery process in case of maceration, fissures, cracks and reddening of the skin caused by external irritative agents. It is particularly suitable to counteract the tendency to the skin dryness caused by: desiccant action of washing, slightly moistened domestic environment, damage from cold or sun exposure. It is also recommended in case of redness and burning of the skin sensitive to shaving.

**PACKAGE**

Tube of 50 ml.

Perfumes and preservatives dermatologically tested.

**HOW TO USE**

Apply and massage gently until completely absorbed.
